PERFIL

My name is Mariana Lara, I am 21 years old, and I am currently in the 9th semester of my Computer Engineering degree, studying in the evening shift. I work as a Mobile Developer at the Civil Defense of the State of Amazonas, where I apply my technical skills in developing solutions that optimize processes and promote efficiency in internal operations.

I am looking for a remote or hybrid job opportunity where I can apply my knowledge, contribute to challenging projects, and add value with my skills as a developer. I am committed to delivering high-quality results and passionate about technology and innovation.

WORK EXPERIENCE

Mobile Developer

Defesa Civil do estado do Amazonas   2023 - (Present)

- Full development of mobile applications using React Native with TypeScript.
- Performed tests to ensure the quality and performance of applications.
- Published and managed applications on the Google Play Store.
- Used Postman and Hoppscotch to verify and test routes and APIs.
- Experience with project management tools like Jira (currently in use).
- Managed local and global state using Zustand.
- Knowledge of SQLite for local data management, ensuring the mobile app's local database.
- Designed user interfaces with TailwindCSS and NativeWind.

PROJECTS

- **Agente - Defesa Civil do estado do Amazonas**

  I developed the new version of the internal application for the Civil Defense of Amazonas to assist in disaster situations by registering family members and community members.

- **Cota Rio - Defesa Civil do estado do Amazonas**

  I developed the "Cota Rio" application for the Civil Defense, aimed at assisting maritime workers in recording and analyzing river levels.

- **Cidadão - Defesa Civil do estado do Amazonas**

  I developed the "Cidadão" application for the Civil Defense, targeting individuals at risk or residents of riverside communities. The app enables the registration of families, allowing the Civil Defense of Amazonas to provide humanitarian aid.

- **Point.Pro - Larads**

  I developed a mobile clock-in application for a company's employees using the React Native framework. Additionally, I created a web system with the ReactJS framework for HR to receive information and manage workers' clock-ins. The backend included database management and route creation using NodeJS, Docker, and Prisma.
